this paper considers the possibility that in linear rational expectations re models all determinate uniquely non explosive solutions coincide with the minimum state variable msv solution which is unique by construction in univariate specifications of the form y t ae t y t 1 cy t 1 u t that result holds if a re solution is unique and non explosive then it is the same as the msv solution also this result holds for multivariate versions if the a and c matrices commute and a certain regularity condition holds more generally however there are models of this form that possess unique non explosive solutions that differ from their msv solutions examples are provided and a strategy for easily constructing others is outlined
